Subject:	Cosmos: A Personal Voyage by Carl Sagan

LearnOutLoud.com

Free Resource - March 17th, 2014

Free Resource of the Day

You may be watching the new TV series *Cosmos: A Spacetime Odyssey* presented by Neil deGrasse Tyson. This series is a follow-up to the 1980 television series *Cosmos: A Personal Voyage*, which was presented by Carl Sagan. The new series updates the script and adds in many stunning new visual effects. You can now watch the first episode of *Cosmos: A Spacetime Odyssey* for free on Hulu.com (we're not sure if this is available in all countries):

Cosmos: A Spacetime Odyssey

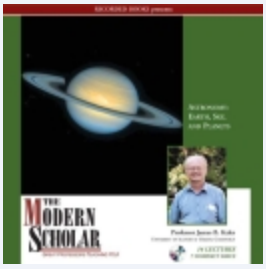
Everyone can enjoy the original *Cosmos: A Personal Voyage* hosted by Carl Sagan and offered by The Science Foundation in its entirety on YouTube:

Cosmos: A Personal Voyage

This thirteen-part television series was written by astronomer Carl Sagan, his wife Ann Druyan, and astrophysicist Steven Soter. From the very first episode called "The Shores of the Cosmic Ocean" Sagan takes us on a wonderful voyage across the cosmos as his spaceship travels through the universe's hundred billion galaxies, the Local Group, the Andromeda Galaxy, the Milky Way, the Orion Nebula, our Solar System, and finally the planet Earth. Sagan also describes the Cosmic Calendar and where humanity lies on its 13.8 billion year timeline. Watch all 13 hour long episodes of the original 1980 television series.

Cosmos: A Personal Voyage

Deal of the Day



Astronomy I: Earth, Sky and Planets

The Earth, the sun and moon, the planets, comets, asteroids and meteors—the solar system is all around us, yet how much do we truly know about it? When we explore the Earth and the layout of the sky, what can we learn about the meanings of the day, the year, the seasons, and the constellations? Which physical laws control what we see, and what are the natures of the celestial bodies? Professor James Kaler—a former Fulbright and Guggenheim Fellow and author of many acclaimed books on astronomy—answers these questions, taking us on a fascinating and informative voyage through the Solar System.

The heart of this course examines the planets themselves, and reveals how they are constructed and how they differ from one another. By studying the physical astronomy of all the planets in the Solar System, we can attempt to understand their true nature. Ultimately, these lectures will bring us to a greater understanding of the Solar System's creation, which brings us again back to the beginning and what it means to us as we look outward from our rotating Earth.

Available on MP3 Audio Download.
